Project Overview

FaithPal is a web application developed for Christians, and inspired by YouVersion Mobile App. It provides a platform where Christians can socialize and learn more about God.

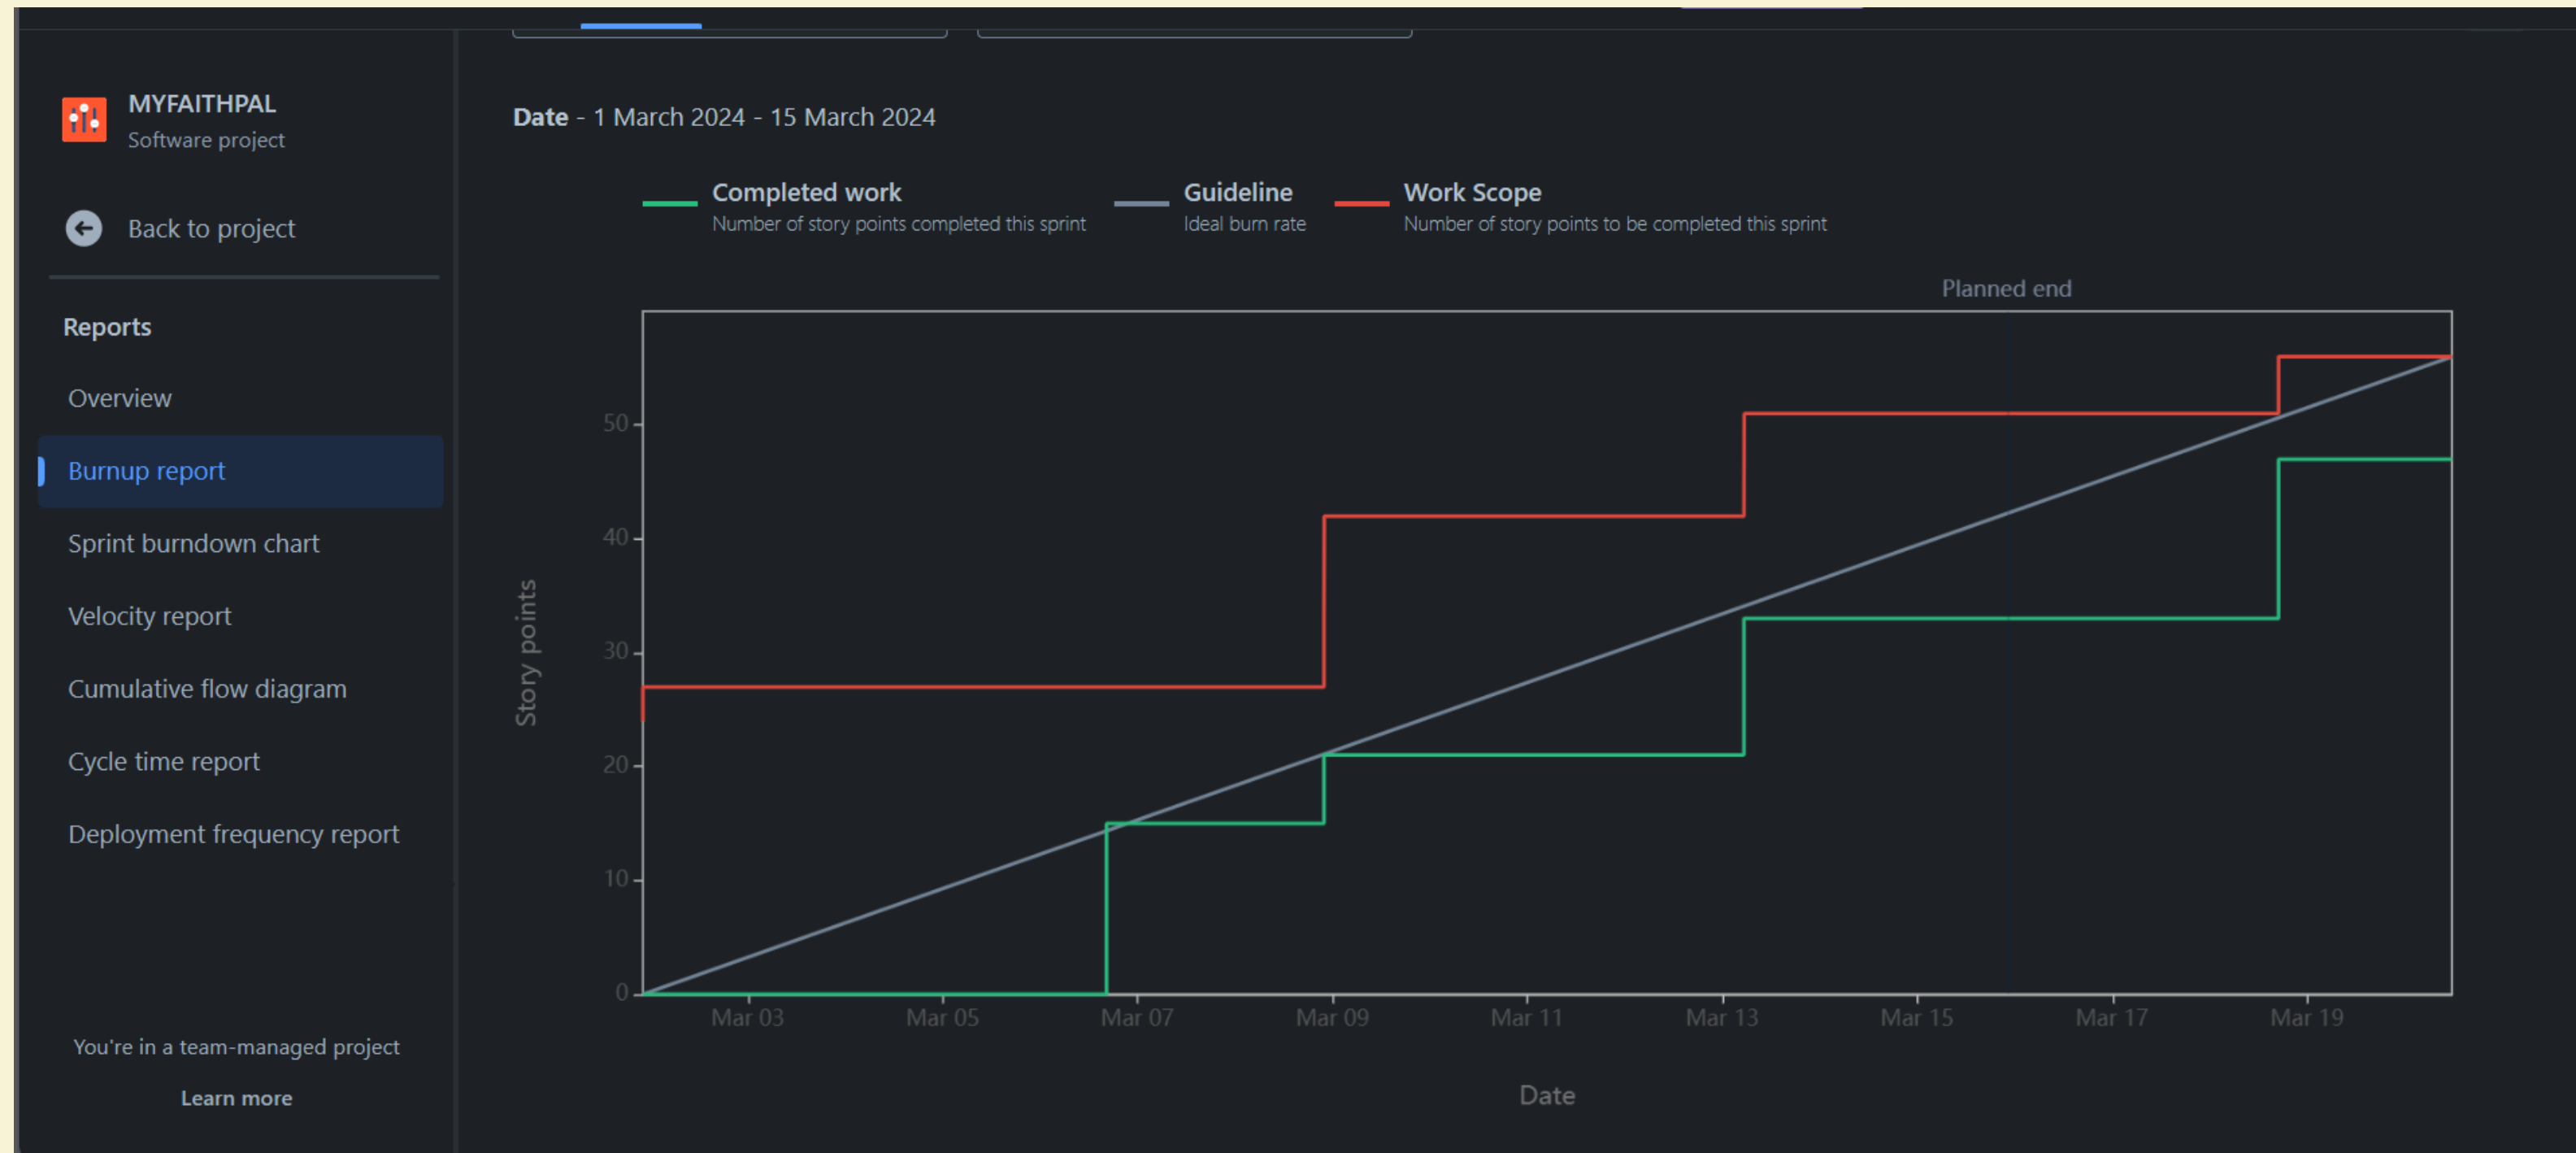

Project Planning

I used Jira to manage project planning for FaithPal. I divided the work into smaller units known as Stories. These tasks were then allocated across multiple two-week periods, referred to as Sprints.

EXAMPLE

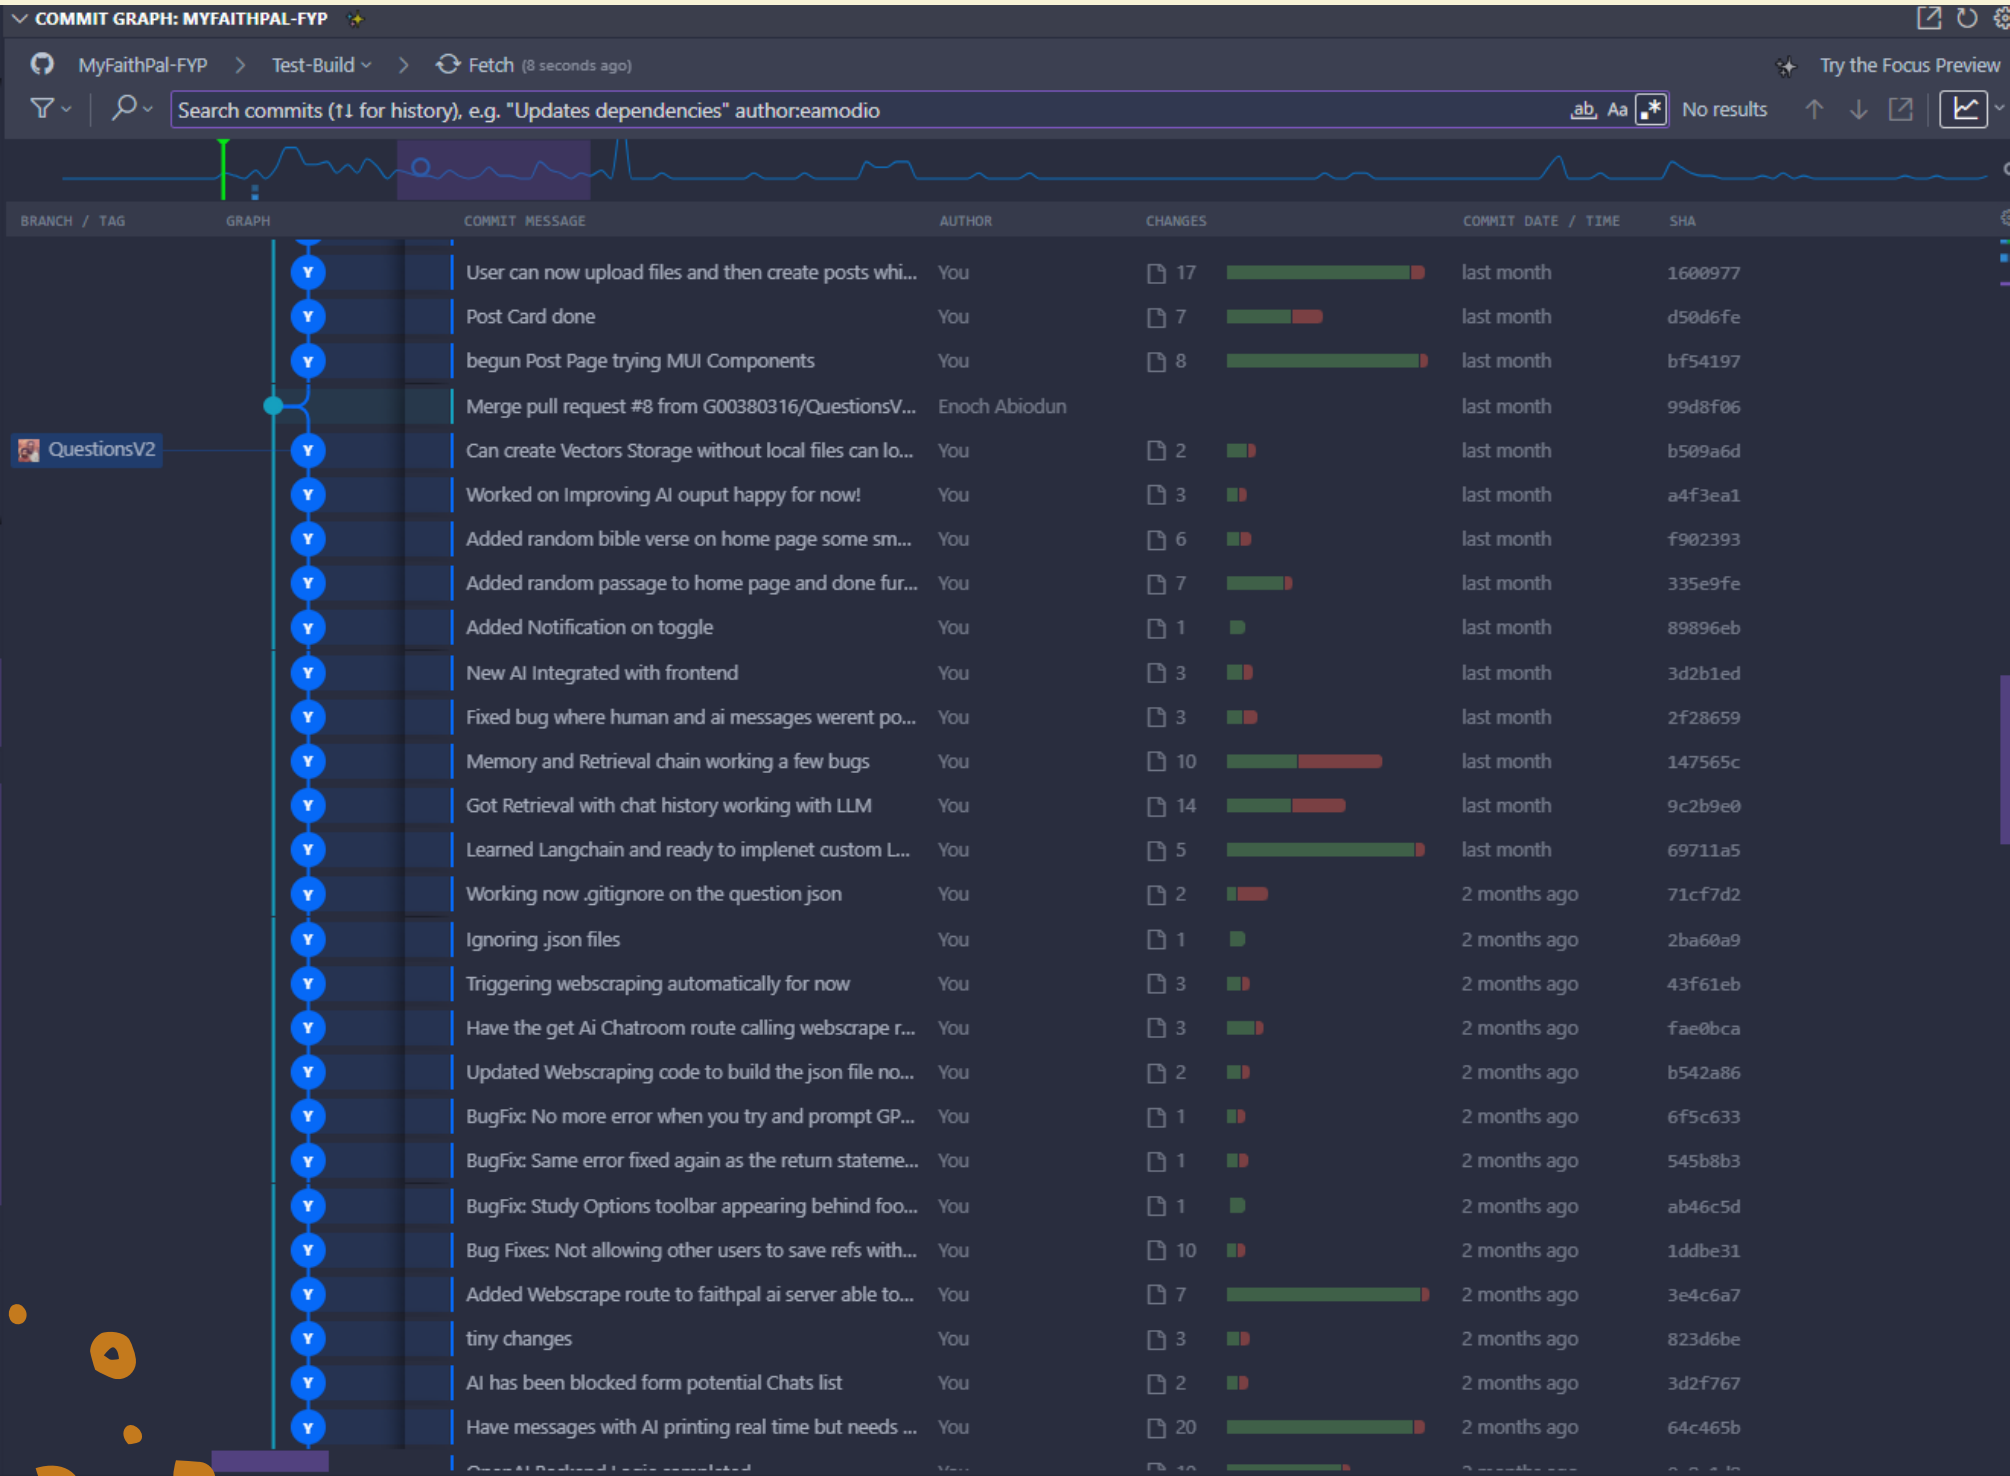

Version Control

Git played a crucial role in my project by enabling me to maintain a detailed version history of code changes. It also allowed me to work on new features without affecting the main codebase, facilitating efficient parallel development.
